

# Programming Paradigms

---

Lecture 10. Introduction to Prolog

# Outline

- Recapping Prolog syntax
- Unification
- Proof search
- Recursion

## Some Prolog-like programming languages

Datomic Cloud

# Development environment

Program   +

```
1 parent('Abe', 'Homer').
2 parent('Homer', 'Bart').
3 parent('Homer', 'Liza').
4 parent('Homer', 'Maggy').
5 parent('Jacqueline', 'Marge').
6 parent('Jacqueline', 'Patty').
7 parent('Jacqueline', 'Selma').
8 parent('Marge', 'Bart').
9 parent('Marge', 'Liza').
10 parent('Marge', 'Maggy').
11
12 ancestor(X, Y) :- parent(X, Y).
13 ancestor(X, Y) :-
14     parent(X, Z), ancestor(Z, Y).
15
```

Open a new tab

 ancestor(X, Y).  
X = 'Abe',  
Y = 'Homer'  
Next 10 100 1,000 Stop

?- ancestor(X, Y).

<https://swish.swi-prolog.org>

## Syntax: simple facts

```
person(mia).  
person(jack).  
person(yolanda).
```

```
likes(vincent, mia).  
likes(marsellus, mia).  
likes(pumpkin, honey_bunny).  
likes(honey_bunny, pumpkin).
```

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

parent/2

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

```
male('Abe').  
male('Homer').  
male('Bart').
```

parent/2

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

```
male('Abe').  
male('Homer').  
male('Bart').
```

parent/2

male/1

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

```
male('Abe').  
male('Homer').  
male('Bart').
```

```
father('Homer') :- male('Homer'), parent('Homer').
```

parent/2

male/1

## Syntax: clauses and arity

```
parent('Abe', 'Homer').  
parent('Homer', 'Bart').  
parent('Homer', 'Liza').  
parent('Homer', 'Maggy').
```

```
male('Abe').  
male('Homer').  
male('Bart').
```

```
father('Homer') :- male('Homer'), parent('Homer').
```

parent/2

male/1

father/1

## Syntax: atoms, variables and numbers

1. Atoms — start with lowercase letter, or put in single quotes  
jack, 'Homer', somethingElse\_123

## Syntax: atoms, variables and numbers

1. Atoms — start with lowercase letter, or put in single quotes  
jack, 'Homer', somethingElse\_123
2. Variables — start with underscore or uppercase letter  
X, Y, Homer, Parent, Child, \_G123, \_

## Syntax: atoms, variables and numbers

1. Atoms — start with lowercase letter, or put in single quotes  
`jack`, `'Homer'`, `somethingElse_123`
2. Variables — start with underscore or uppercase letter  
`X`, `Y`, `Homer`, `Parent`, `Child`, `_G123`, `_`
3. Numbers — as usual,  
but we are interested only in integers most of the time  
`12`, `-5`, `0`

Syntax: complex terms

`functor(term1, term2, ..., termN)`

Syntax: complex terms

`functor(term1, term2, ..., termN)`

Only atom, cannot be a variable!

Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

`add(1, 2)`

## Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

`add(1, 2)`

`add(1, add(3, 4))`

## Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

`add(1, 2)`

`add(1, add(3, 4))`

`add(X, add(3, Y))`

## Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

`add(1, 2)`

`add(1, add(3, 4))`

`add(X, add(3, Y))`

`X(jack)`

## Syntax: complex terms

`functor(term1, term2, ..., termN)`

`parent(jack, anne)`

`add(1, 2)`

`add(1, add(3, 4))`

`add(X, add(3, Y))`

`X(jack)` — not a valid term

# Unification

Consider the three groups of terms:

1. Constants (atoms, numbers) — `hello`, `23`, `'a book'`
2. Variables — `X`, `Book`, `_Example`, `_`
3. Complex terms — `connected(1, Y)`, `parent('Homer')`

# Unification

Consider the three groups of terms:

1. Constants (atoms, numbers) — `hello`, `23`, `'a book'`
2. Variables — `X`, `Book`, `_Example`, `_`
3. Complex terms — `connected(1, Y)`, `parent('Homer')`

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- hello = hello

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- hello = hello

**true**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

? - 42 = 42

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

? - 42 = 42

**true**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

? -  $42 = 21+21$

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

? -  $42 = 21+21$

**false**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- hello = X

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- hello = X

**X = hello**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- `word(hello) = word(X)`

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- word(hello) = word(X)

**X = hello**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- word(hello) = X

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- word(hello) = X

X = word(hello)

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- `parent(X, 'Bart') = parent('Homer', Y)`

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- `parent(X, 'Bart') = parent('Homer', Y)`

**X = 'Homer',**

**Y = 'Bart'**

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- `parent(X, 'Bart') = parent('Homer', X)`

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- `parent(X, 'Bart') = parent('Homer', X)`

**false**

Does **not** unify!

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- friend(X, 'Bart') = friend('Bart', X)

# Unification

Intuitively, two terms unify

1. if they are the same, or
2. if variables in both terms can be instantiated to make the terms the same

?- friend(X, 'Bart') = friend('Bart', X)

X = 'Bart'

# Proof search

```

% add(X, Y, X+Y)
```

```
add(z, Y, Y).
```

```
add(s(X), Y, s(R)) :- add(X, Y, R).
```

```
?- add(s(s(z)), s(z), R).
```

```
R = s(s(s(z)))
```

```
?- add(s(s(z)), Y, s(s(s(z)))).
```

## Recursion in Prolog: adding unary numbers

```
% add(X, Y, X+Y)
```

```
add(z, Y, Y).
```

```
add(s(X), Y, s(R)) :- add(X, Y, R).
```

```
?- add(s(s(z)), s(z), R).
```

```
R = s(s(s(z)))
```

```
?- add(s(s(z)), Y, s(s(s(z)))).
```

```
Y = s(z)
```

## Recursion in Prolog: adding unary numbers

```
% add(X, Y, X+Y)
```

```
add(z, Y, Y).
```

```
add(s(X), Y, s(R)) :- add(X, Y, R).
```

```
?- add(s(s(z)), s(z), R).
```

```
R = s(s(s(z)))
```

```
?- add(s(s(z)), Y, s(s(s(z)))).
```

```
Y = s(z)
```

```
?- add(X, Y, s(s(s(z))))
```

**Question:** Is there a valid answer? Is yes, then how many?

# Homework (self-study)

1. Read **Chapters 4 and 5** of Learn Prolog Now!  
<http://www.let.rug.nl/bos/lpn/lpnpage.php?pagetype=html&pageid=lpn-htmlch1>
2. Work through the **exercises** from both chapters, using SWISH  
<https://swish.swi-prolog.org>

**What was the most  
unclear part of the  
lecture for you?**

See Moodle
